Agenda

01

What Simpli Does

Platform overview and market position

02

The Problem

Three layers of charity activation failure

03

Production Evidence

Data from 198 charity partners

04

The Solution

Charity activation layer design

05

Wireframes and Mockups

Five screen flow with design rationale

06

Rollout and Metrics

Phased approach and success criteria

What Simpli Does

The end-to-end platform for enterprise product donation. Simpli connects large corporations with excess inventory to vetted nonprofit partners, handling vetting, logistics, and impact reporting.

\$70M+

Donations
Facilitated

198

Charity
Partners

6

Active Corporate
Pilots

Clients include Cargill, L'Oreal, Glow Recipe, Cardinal Health, BUNZL, and others.

Platform Products

SearchCharities.org

Charity directory (1.5M+ orgs)

SimpliServe

QR point-of-giving for events

MissionMatch

Charity to donation matching algorithm

The Problem

Charities onboard but never activate. Three layers of failure compound between signup and value delivery.

Three Layers of Failure

Production data from app.simpli.supply reveals compounding gaps between signup and value delivery.

1

55% **never complete onboarding**

109 of 198 charities are stuck at Invited or Claimed status. They signed up but never finished.

2

77% **never receive a donation**

153 of 198 charities have never received a single donation. Even many onboarded charities sit idle.

3

200
+ **charities needed to meet demand**

Simpli targets \$150M+ in donations this year. Current 89 onboarded charities cannot absorb the volume.

The Onboarding Funnel

198 Total Charities

55% drop off before completing onboarding

89 Onboarded (45%)

49% of onboarded never receive a donation

45 Received Donation (23%)

Key finding: 10 charities have "Invited" status but somehow received donations. Vetting is independent of onboarding (17 Onboarded charities are Unvetted). The funnel has invisible shortcuts and dead ends.

Why Charities Drop Off

CURRENT EXPERIENCE

Generic invite email ("Join Simpli")

13-section onboarding wizard

15 to 20 min of data entry upfront

Zero mention of value until complete

No tracking of what drove signup

90-day average order completion time

THE RESULT

55%

never finish onboarding

77%

never receive a donation

99.4%

acquisition source unknown

90 days

avg order completion

Charities are pushed through onboarding, not pulled in by value.

The Business Pressure

Corporate demand is scaling. The bottleneck is not supply of donations. It is supply of active charities to receive them.

SUPPLY (CORPORATE)

\$4.57M+

across 6 active pilots (297+ pallets)

\$7.3M+ sales pipeline | \$150M+ annual target

DEMAND (CHARITY CAPACITY)

89

onboarded charities (need 200+)

45 have ever received a donation

"We need a bunch of big ones that can absorb dozens of pallets each month... Hypothetically, y'all can just come up with, in a vacuum, something better than what we're doing, and then we would just do that."

Tommy, CEO of Simpli (April 20, 2026)

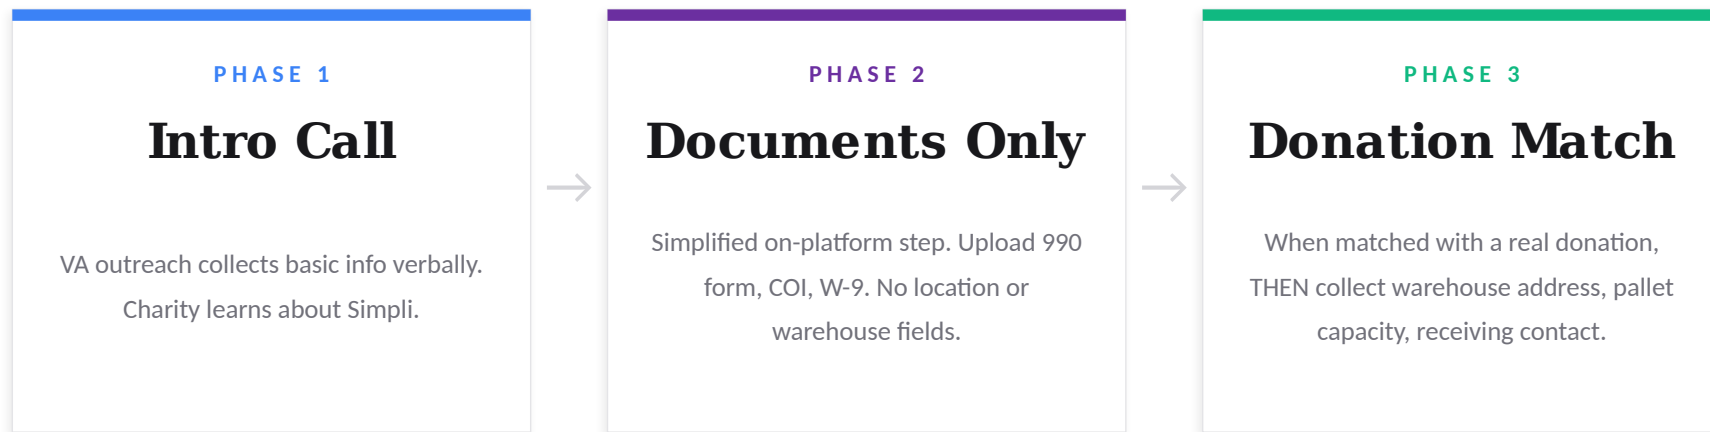

The Solution

An activation layer that wraps around Joseph's three-phase onboarding rebuild.

Lead with value. Collect data incrementally.

Design Context

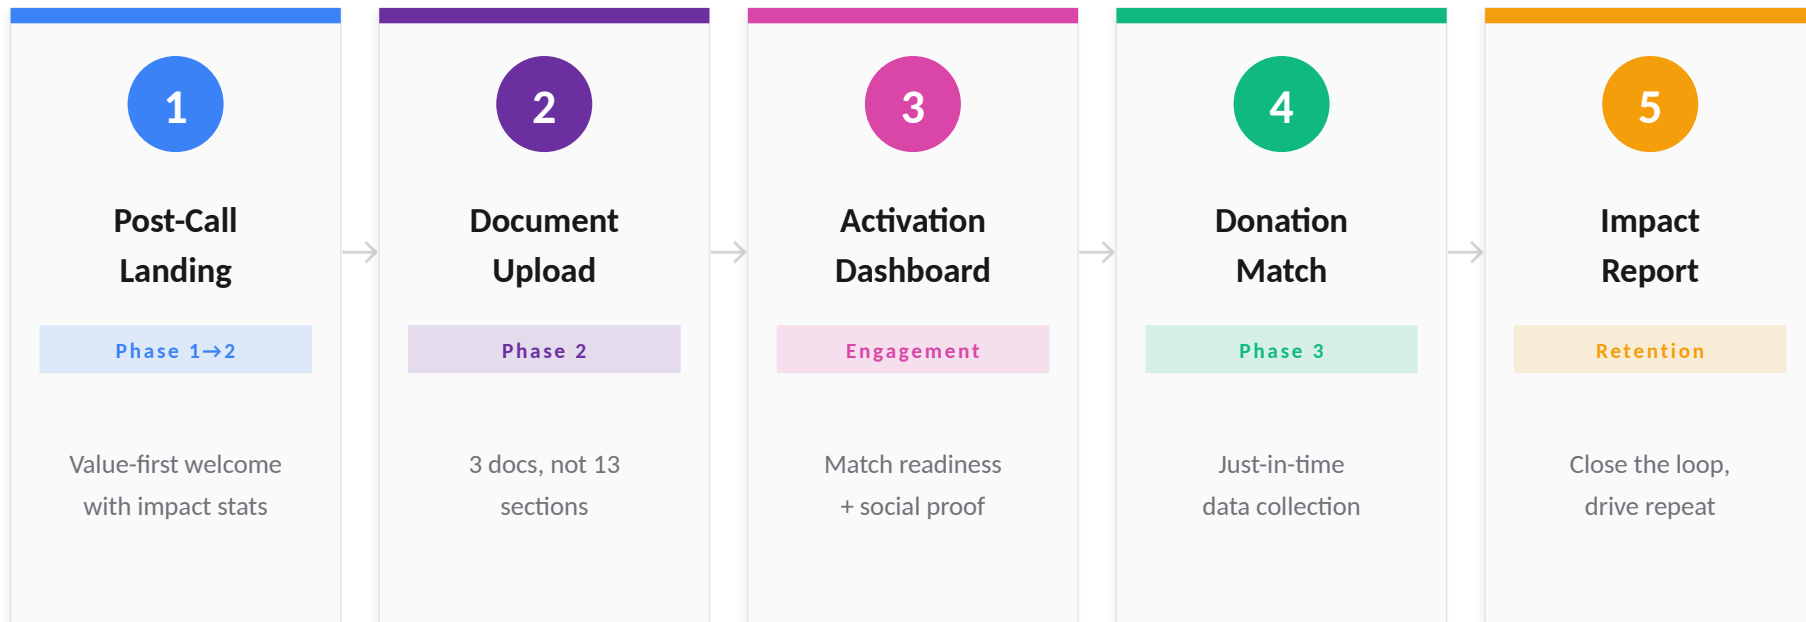

Joseph (engineer) is already rebuilding onboarding into three phases. Our design wraps around his new model.

Our value-add: We are not just simplifying onboarding (Joseph is doing that). We designed the charity engagement experience that wraps around his three-phase model. A value-first welcome, an activation dashboard for the 90-day wait, and a frictionless donation match flow.

Five Screen Flow

Each screen maps to a moment in the charity journey where value is delivered before data is requested.

Screens 1 and 2: Onboarding Entry

Value-first welcome after intro call → Simplified document upload (3 docs, skip option)

Impact Report

Before vs. After

CURRENT FLOW

- ✗ Generic invite email
- ✗ No value proposition shown upfront
- ✗ 13-section onboarding form
- ✗ All data required before any value
- ✗ 90-day wait with zero engagement
- ✗ No tracking of what works

ACTIVATION LAYER

- ✓ Personalized value hook after intro call
- ✓ "\$X in donations waiting for you"
- ✓ 3 documents to get started
- ✓ Value shown before data entry
- ✓ Dashboard with match readiness + alerts
- ✓ Just-in-time data at donation match

Core principle: Lead with value, collect data incrementally. Show charities what is waiting for them BEFORE asking them to do anything. Collect logistics data at the moment of maximum motivation (when a real donation is on the table).

Feature Prioritization

y

Rollout Plan

Phase 1: Validate

Weeks 1 to 8 (Complete)

- ✓ Production platform audit (198 charities)
- ✓ Stakeholder interviews with Tommy + Joseph
- ✓ PRD with evidence-backed problem framing
- ✓ Wireframes and high-fidelity mockups
- ✓ Interactive prototype
- ✓ Feature prioritization framework

Phase 2: Build

Post-Handoff

- ✓ Engineering handoff to Simpli team
- ✓ A/B test hook messaging variants
- ✓ MVP of Phase 1 and 2 screens
- ✓ Analytics integration (PostHog)
- ✓ Pilot with 10 to 20 charities

Phase 3: Scale

Post-Validation

- ✓ Full rollout to new charity signups
- ✓ Outbound email sequence integration
- ✓ Impact report and media gallery
- ✓ Retroactive activation for existing 198
- ✓ SEO optimization for self-serve flow

Success Metrics

Onboarding Completion	45%	→	65%+	Invited charities who finish the process
First Donation Rate	23%	→	40%+	Onboarded charities who receive a donation
Time to First Value	Unknown	→	< 5 min	Time from first touch to seeing match data
Profile Completeness	Incomplete*	→	80%+	Key fields filled across active charities
Acquisition Tracking	0.6%	→	90%+	Charities with known acquisition source

* Even active charities like Midwest Food Bank have empty Pallet Capacity fields

simpli

The Path Forward

Simpli has corporate demand. It has a platform. It has 198 charity partners.

What it needs is an activation layer that turns those partners into participants.
